## List of Figures

1	Estimated residuals from model XXX. ... . . . . .	6
2	Estimated residuals (2) from model XXX. ... . . . . .	10

## List of Tables

1	Detailed descriptive statistics of location and dispersion for 2100 observed swap rates for the period from February 15, 1999 to March 2, 2007. Swap rates measured as 3.12 (instead of 0.0312). . . . .	6
2	This table was handwritten with LaTeX. . . . .	7
3	Detailed descriptive statistics of location and dispersion for 2100 observed swap rates for the period from February 15, 1999 to March 2, 2007. Swap rates measured as 3.12 (instead of 0.0312). . . . .	10

# Preface

Welcome to the thesis template. This template is based on (and in many places copied directly from) the HU Berlin School of Business and Economics LaTeX template, but hopefully it will provide a nicer interface for those that have never used LaTeX before.

## 1 Introduction

- What is the subject of the study? Describe the problem.
- What is the purpose of the study (working hypothesis)?
- What do we already know about the subject (literature review)? Use citations: Lingelfelser, Wagner, and André (2011) shows that... Alternative Forms of the Wald test are considered (Kuncheva 2004).
- What is the innovation of the study?
- Provide an overview of your results.
- Outline of the paper:  
*The paper is organized as follows. The next section describes the model under investigation. Section “[Data]” describes the data set and Section “Results” presents the results. Finally, Section “Conclusion” concludes.*
- The introduction should not be longer than 4 pages.

## 2 Methodology

## 3 Results

```

```

- Organize material and present results.
- Use tables, figures (but prefer visual presentation):
  - Tables and figures should supplement (and not duplicate) the text.
  - Tables and figures should be provided with legends.
  - *Figure 1 shows how to include and reference graphics. The graphic must be labelled before. Files must be in .eps format. You can do this really easily in R Markdown with `knitr::include_graphics()`!*
  - Figures can be referenced with `\@ref(fig:<name>)`, where `<name>` is the name of the code chunk.
- Tables and graphics may appear in the text or in the appendix, especially if there are many simulation results tabulated, but is also depends on the study and number of tables resp. figures. The key graphs and tables must appear in the text!

**Figure 1:** Estimated residuals from model XXX. ...

	3m	6m	1yr	2yr	3yr	5yr	7yr	10yr	12yr	15yr
Mean	3.138	3.191	3.307	3.544	3.756	4.093	4.354	4.621	4.741	4.878
StD	0.915	0.919	0.935	0.910	0.876	0.825	0.803	0.776	0.768	0.762

**Table 1:** Detailed descriptive statistics of location and dispersion for 2100 observed swap rates for the period from February 15, 1999 to March 2, 2007. Swap rates measured as 3.12 (instead of 0.0312).

- Allows the reader to judge whether the sample is biased or to evaluate possible impacts of outliers, for example.
- Here tables can be easily integrated using the `kable()` function in the `knitr` package (with perhaps some additional help from the `kableExtra` package). `kable()` will automatically generate a label for the table environment. That way you don't have to manually enter in the table in LaTeX, you can embed tables from R code.
- Tables can be referenced using `\@ref(label)`, where `label` is `tab:<name>`, where `<name>` is the code chunk label.
- The appearance may look different to tables directly typed with LaTeX, due to limitations in `kable()`. To compare:
- R Markdown can also supports math equations just like *LaTeX*!

	3m	6m	1yr	2yr	3yr	5yr	7yr	10yr	12yr	15yr
Mean	3.138	3.191	3.307	3.544	3.756	4.093	4.354	4.621	4.741	4.878
StD	0.915	0.919	0.935	0.910	0.876	0.825	0.803	0.776	0.768	0.762

**Table 2:** This table was handwritten with LaTeX.

- Equation (1) represents the ACs of a stationary stochastic process:

$$f_y(\lambda) = (2\pi)^{-1} \sum_{j=-\infty}^{\infty} \gamma_j e^{-i\lambda j} = (2\pi)^{-1} \left( \gamma_0 + 2 \sum_{j=1}^{\infty} \gamma_j \cos(\lambda j) \right) \quad (1)$$

where  $i = \sqrt{-1}$  is the imaginary unit,  $\lambda \in [-\pi, \pi]$  is the frequency and the  $\gamma_j$  are the autocovariances of  $y_t$ .

- Equations can be referenced with `\@ref{eq:<name>}`, where name is defined by adding `(\#eq:<name>)` in the line immediately before `\end{equation}`.

### 3.1 Review of Results

- Do the results support or do they contradict theory ?
- What does the reader learn from the results?
- Try to give an intuition for your results.
- Provide robustness checks.
- Compare to previous research.

## 4 Discussion

## 5 Conclusion

- Give a short summary of what has been done and what has been found.
- Expose results concisely.
- Draw conclusions about the problem studied. What are the implications of your findings?
- Point out some limitations of study (assist reader in judging validity of findings).

- Suggest issues for future research.
